

RESINTECH CG10-UPS is a sodium form 10% crosslinked gel strong acid cation resin. *CG10-UPS* is a uniform particle size resin with high void space and low coefficient of drag. *ResinTech CG10-UPS* is intended for use where resin uniformity is an important attribute to help reduce pressure loss or prevent strainer plugging. *CG10-UPS* is available in the sodium or hydrogen form (when ordered as *CG10-H-UPS*).

FEATURES & BENEFITS

HIGHLY UNIFORM PARTICLE SIZE

20 to 40 mesh size, provides low pressure drop and superior kinetics

10% DIVINYLBENZENE

Gives greatly increased life where resin degradation due to oxidative effects are anticipated

SUPERIOR PHYSICAL STABILITY

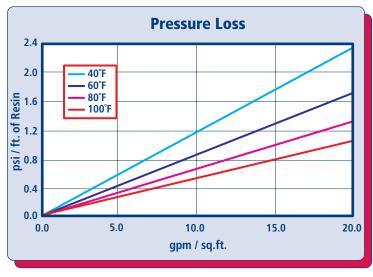

95% plus sphericity and high crush strengths together with carefully controlled particle distribution provides long life and low pressure drop

COMPLIES WITH US FDA REGULATIONS

Conforms to paragraph 21CFR173.25 of the Food Additives Regulations of the US FDA

Prior to first use for potable water, resin should be backwashed for a minimum of 20 minutes, followed by 10 bed volumes of downflow rinse.

HYDRAULIC PROPERTIES

The graph above shows the expected pressure loss of *ResinTech CG10-UPS* per foot of bed depth as a function of flow rate at various temperatures.

BACKWASH

The graph above shows the expansion characteristics of *ResinTech CG10-UPS* as a function of flow rate at various temperatures.

RESINTECH® CG10-UPS

PHYSICAL PROPERTIES

Polymer Structure Styrene/DVB

Polymer Type Gel

Functional Group Sulfonic Acid
Physical Form Spherical beads
Ionic Form as shipped Sodium or Hydrogen

Total Capacity

Hydrogen form >2.0 meq/mL Sodium form >2.2 meq/mL

Water Retention

Hydrogen form 46 to 52 percent Sodium form 39 to 45 percent

Approximate Shipping Weight

Hydrogen form 51 lbs./cu.ft. Sodium form 53 lbs./cu.ft. Swelling, Na to H 4 to 8 percent Screen Size Distribution (U.S. mesh) 20 to 40 Maximum Fines Content (<50 mesh) 0.5 percent Minimum Sphericity 95 percent **Uniformity Coefficient** 1.25 approx. **Resin Color** Amber

Note: Physical properties can be certified on a per lot basis, available upon request

SUGGESTED OPERATING CONDITIONS

Maximum continuous temperature

Hydrogen form 265°F Sodium form 280°F Minimum bed depth 24 inches

Backwash expansion 25 to 50 percent

Maximum pressure loss 25 psi
Operating pH range 0 to 14 SU

Regenerant Concentration

 $\begin{array}{ccc} \mbox{Hydrogen cycle} & 5 \mbox{ to 10 percent HCl} \\ \mbox{Hydrogen cycle} & 1 \mbox{ to 8 percent } \mbox{H}_2\mbox{SO}_4 \\ \mbox{Salt cycle} & 10 \mbox{ to 15 percent NaCl} \\ \mbox{Regenerant level} & 4 \mbox{ to 15 lbs./cu.ft.} \\ \mbox{Regenerant flow rate} & 0.5 \mbox{ to 1.5 gpm/cu.ft.} \end{array}$

Regenerant contact time >20 minutes

Displacement flow rate

Displacement volume

10 to 15 gallons/cu.ft.

Rinse flow rate

Same as service flow

Rinse volume

35 to 60 gallons/cu.ft.

Service flow rate

1 to 10 gpm/cu.ft.

Note: These guidelines describe average low risk operating conditions. They are not intended to be absolute minimums or maximums.

For operation outside these guidelines, contact ResinTech Technical Support

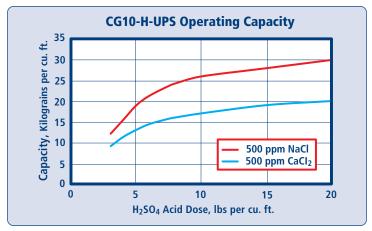

APPLICATIONS

SOFTENING

RESINTECH CG10-UPS is a 10% crosslinked cation resin optimized for use in condensate softeners, high flow rate applications, and other applications where high physical and chemical durability are more important than high chemical efficiency. CG10-UPS is proven to have a long useful life, even in heavily chlorinated waters where other cation resins do not last.

DEMINERALIZATION

ResinTech CG10-UPS can be used as the cation component in a variety of demineralization configurations where a hydrogen form cation resin is coupled with a hydroxide form anion resin. The high density of CG10-UPS provides ideal separation in polishing mixed beds. CG10-UPS has higher total capacity and lower chemical efficiency compared to CG8-UPS.

Capacity based on 500 ppm of stated salt (as CaCO₃) with 0% alkalinity, 36 in. bed depth, flow rate of 2 to 4 gpm per cu. ft. and >30 min. chemical injection time. Sulfuric acid concentration must be stepwise when calcium concentration exceeds 20% of total cations. No engineering downgrade has been applied.

PACKED BEDS

RESINTECH CG10-UPS has a very narrow particle size range. The uniformity allows a slightly smaller bead size to be used which results in faster exchange of ions, more efficient regeneration and lower leakage. CG10-UPS is ideal for packed beds and other types of countercurrent ion exchangers where consistent operation is important cycle after cycle. Higher void space and minimal fine mesh beads provides low pressure loss and helps prevents channeling and other distribution problems. Packed beds typically have limited freeboard (only a few inches with the resin in the swollen form).

CAUTION: DO NOT MIX ION EXCHANGE RESIN WITH STRONG OXIDIZING AGENTS. Nitric acid and other strong oxidizing agents can cause explosive reactions when mixed with organic materials, such as ion exchange resins.

MATERIAL SAFETY DATA SHEETS (MSDS) are available for all ResinTech Inc. products. To obtain a copy, contact your local ResinTech sales representative or our corporate headquarters. They contain important health and safety information. That information may be needed to protect your employees and customers from any known health and safety hazards associated with our products. We recommend that you secure and study the pertinent MSDS for our products and any other products being used. These suggestions and data are based on information we believe to be reliable. They are offered in good faith. However we do not make any guarantee or warranty. We caution against using these products in an unsafe manner or in violation of any patents; further we assume no liability for the consequences of any such actions.
