### Features system:

- The cartridges can be used as a final filter or pre-filter, in order to protect the expensive filtration systems such as absolute microfiltration. The cartridges have been tested for filtration of at least 95% of the particles in suspension.
- The extraordinary capacity cartridge filter is obtained thanks to a wide area of filter material. The cartridges must be replaced when starting to observe the loss of load, the substitution of any form is subject to the maximum permitted / required by the current process.
